## belalatus® ten

A unique appearance! Mounted as sun and weather protection on a building. With its approx. 65 kg, the belalatus® ten is extremely light and filigree. The fan has ten elements, giving it an aesthetic appearance. Due to the large number of elements, the fabric only falls slightly down in its closed state. Thus, this radius Delta can be parked under an aluminum roof. On our website, under the section „Photomontage“, you can visualize your situation with the belalatus® ten yourself.

### Standard configuration

Three 24V dc motors with infrared handheld transmitters for lifting, tilting, rotating and fan-in and out.

Frame color natural anodized stainless steel parts electro polished.

Lightweight high-tech fabric, almost waterproof, freely selectable from our stand collection.

Radius dimension from 2 to 3.5 m every 10 cm.

Angel 75°, 90°, 105°, 120°, 132°.

### Options

Bus radio control, frame in RAL color shades powder-coated, restraint brackets or supports, sun and wind guard, aluminum roof, protective cover.

### The most important advantages of belalatus at a glance

- Optimal alignment according to the position of the sun
- Rotating around the corner (note possibilities)
- Good climate in the area behind
- Easy to use
- High quality material, high quality workmanship
- With suitable fabric, suitable even when it rains
- Swiss product

From 40 km/h wind force the belalatus® ten must be closed.

Design and price changes reserved.
